In the Specification

Please replace paragraph 0044 beginning at page 10 with the following rewritten paragraph:

[0044] Referring now to Figs. 8, 9, and 10, detailed call flow charts are presented. In these figures, MS-1 is the called party, and MS-2 is the mobile user to which the call is forwarded. All messages between the MS and the WS are defined in the 2.5G and 3G wireless standards. The other messages use other protocols well known in the telecommunication industry such as SIP, TCP/IP, and MEGACO (Media Gateway Control protocol), CAMEL (Customized Application of Mobile Enhanced Logic), and DTAP (Direct Access Transfer Protocol). Again, since these protocols are well known in the industry, details are not described herein.
